REPORT ON THE WORKING OF THE SCHEME DURING 1953-1954.

The Scheme of antimosquito measures proposed by the Director of Public Health and approved by the Government in G.O.Ms.No.248, P.H., dated 20th January 1950 was carried out by the Municipality during 1953-1954.

The staff consisted of one Maistry and four Oiling Mazdoors and it was entertained for a period of nearly 9 months i.e. during non-monsoon months only as it is not possible to carry out any operations during the heavy rains. In addition to the above, one of the Public Health Maistries was sent to supervise the work of the Mazdoors who were deputed in two groups of two each and one Maistry was attached to each group. Four sprayers in good order were in use. Gammexane P-520; Hexidole 950 and D.D.T. were used as larvicides. Systematic spraying was organised by dividing 12 wards into 12 spraying blocks two blocks being attended to daily in turns by four Mazdoors under the supervision of two Maistries.

Cesspools and other stagnations were also sprayed once every week. In addition to spraying with D.D.T. emulsion, oil booms were placed in some of the drains where there was incessant flow of sullage and wash water. This preventive measure yielded good results. One of the Sanitary Inspectors who has undergone Malaria training was put in charge of the scheme. The Municipal Health Officer used to effectively supervise and check the control measures by paying periodical visits to all breeding places.

The result of the scheme may be said to be satisfactory.
